

Project Design Phase

Incident Lifecycle Automation in ServiceNow

Date	02 October 2026
Name	Kishorekumar M
Project Name	Incident Lifecycle Automation in ServiceNow
Maximum Marks	

1. Proposed Solution

Parameter	Description
Problem to be solved	Untracked and unclassified IT incidents, delayed escalations and low visibility into resolution progress.
Proposed solution	An automated Incident Management solution in ServiceNow that handles the incident lifecycle from creation to resolution using workflow automation.
Integrations	Knowledge Management (Agent Assist and article creation) and Change Management (emergency changes).
Business impact	Faster issue resolution, fewer recurring incidents and improved IT service efficiency.
Scalability	Built on standard ServiceNow modules and configuration, so it can be maintained and extended by the admin.

2. Solution Architecture (Incident Lifecycle Flow)

Step	Stage	ServiceNow Component	Outcome
1	Create	Service Operations Workspace	Incident record logged
2	Classify	Incident form	Category, Subcategory, Urgency, Service and CI set
3	Assist	Agent Assist / Knowledge	Relevant articles suggested
4	Escalate	Assignment group	Reassigned to Level 2 Support
5	Change	Change Management	Emergency Change Request created
6	Link	Child Incidents	Related incidents linked to parent
7	Resolve	Incident resolution fields	Cause and resolution documented
8	Learn	Knowledge Management	Knowledge Article created from incident
9	Validate	SLAs and Related Lists	SLA and related records verified

3. Problem-Solution Fit

Problem	How the solution addresses it
Poor tracking of incidents	All incidents are recorded in ServiceNow with related lists and history
Lack of proper classification	Mandatory structured classification fields
Delayed escalations	Reassignment to Level 2 teams and emergency change creation from the incident
Minimal visibility into progress	Transparent tracking of state, SLAs and related records
Root cause tracking is difficult	Cause and resolution documentation plus knowledge articles
