

# Requirement Analysis

## Incident Lifecycle Automation in ServiceNow

|               |                                             |
|---------------|---------------------------------------------|
| Date          | 02 October 2026                             |
| Name          | Kishorekumar M                              |
| Project Name  | Incident Lifecycle Automation in ServiceNow |
| Maximum Marks |                                             |

### 1. Business Objectives

In many organizations, IT incidents are reported through emails, phone calls, or informal communication channels. This leads to poor tracking, lack of proper classification, delayed escalations, and minimal visibility into resolution progress. Without structured Incident Management, issues may remain unresolved, SLAs may be breached, and root cause tracking becomes difficult.

### 2. Functional Scope

The functional scope includes:

1. Incident Record Creation in Service Operations Workspace.
2. Incident Classification (Category, Subcategory, Urgency, Service, CI).
3. Agent Assist Knowledge Integration.
4. Reassignment to Level 2 Support Teams.
5. Emergency Change Request Creation.
6. Child Incident Creation.
7. Incident Cause & Resolution Documentation.
8. Knowledge Article Creation from Incident.
9. SLA and Related Record Tracking.

### 3. Stakeholder Mapping

| Stakeholder                              | Role                      | Needs / Expectations                    | Impact of Automation                            |
|------------------------------------------|---------------------------|-----------------------------------------|-------------------------------------------------|
| End Users                                | Report IT issues          | Quick resolution, visibility            | Faster issue resolution<br>Transparent tracking |
| Service Desk Agents                      | First-level support       | Easy logging, classification tools      | Standardized intake<br>Faster escalation        |
| Level 2 Support (Network/Hardware Teams) | Diagnose & resolve issues | Complete incident data, related records | Better diagnosis<br>Clear task ownership        |
| Change Management Team                   | Handle emergency changes  | Structured change requests              | Integrated change control                       |
| ServiceNow Admin                         | Maintain configuration    | Scalable and trackable solution         | Controlled process management                   |

## 4. Non-Functional Requirements

| Requirement  | Description                                                                               |
|--------------|-------------------------------------------------------------------------------------------|
| Usability    | Standardized incident forms and classification fields that are easy for agents to use.    |
| Security     | Access controlled through user roles such as admin and itil.                              |
| Traceability | Related records, SLAs and activity history visible from the incident.                     |
| Scalability  | Configuration-based solution that can be maintained and extended by the ServiceNow Admin. |

## 5. Technical Requirements

The project requires a ServiceNow ITSM instance with Incident, Knowledge, and Change Management modules enabled. A modern web browser, a stable internet connection, and appropriate user roles (such as admin or itil) are required for configuration, testing, and execution.

- ServiceNow ITSM instance with Incident, Knowledge and Change Management modules enabled
- Modern web browser
- Stable internet connection
- User roles such as admin or itil
